

DART Provides an Ideal Digital Experience for Travelers in the Lone Star State Powered by Progress® Sitefinity® and Telerik® DevCraft™

AT A GLANCE

Dallas Area Rapid Transit (DART) serves the citizens of North Texas with a multimodal network of transportation opportunities. The organization started implementing Progress® Sitefinity® with Telerik® DevCraft™ (including Telerik, Kendo UI and Telerik Reporting), and successfully migrated its old website from classic ASP (Active Server Pages). As a result, DART's newest version of the website now has an easy-to-use scheduling feature for travelers and an equally intuitive backend for content editors.

Challenge

DART wanted to migrate from classic ASP to Sitefinity .NET Core, while implementing new tools to create better customer experiences and improve website development processes.

“Sitefinity is easy to use for our non-technical users, easy to integrate with other platforms, and makes change to market faster with easy-to-use widgets. It's a robust and flexible DXP that provides a wide range of features and capabilities for building and managing websites and applications, while also being scalable, secure and customizable. Complemented by the Telerik and Kendo UI components for Web development, Sitefinity is a one-of-a kind DX platform that solves for a variety of use cases. Compared to other DXP platforms, Sitefinity is the easiest to use, based on its user-friendly interface and visual design tools.”

Rojan Ulak, Senior Manager,
Software Engineering, DART

Solution

Use Sitefinity and begin migrating from classic ASP onto .NET Core.

Implement the Kendo UI Data Grid, Autocomplete, Scheduler and DateTimePicker components to provide travelers with improved timetables and travel experiences.

Streamline the development process by adopting best CI/CD practices with Sitefinity.

Results

The agency's user base is now well over 190K and Sitefinity's built-in SEO features have helped increase website traffic to 500K page views per month, totaling 30.11 million server requests.

Capable of fixing bugs and defects on the website without having to wait for after hours.

Improved experience for content editors to publish changes without IT overhead.

CTA: Build, deploy and integrate fast with the modern .NET Core Toolset of Progress® Sitefinity®.

Design intuitive experiences with Progress® Telerik UI for ASP.NET Core, Progress® Kendo UI® and Progress® Telerik® Reporting.
