

Progress MOVEit Mobile

Enhance productivity for your mobile workforce and protection for your organization

DATA SHEET

MOVEit MOBILE BENEFITS

- ✓ **Enables mobile users to participate in business processes**
- ✓ **Supports most popular devices and native applications**
- ✓ **Provides visibility and control of mobile file transfers by central administrator**
- ✓ **Supports Single Sign-On (SSO)**
- ✓ **Supports Multi-Factor Authentication (MFA) and Secure Folder Sharing**
- ✓ **Free for Progress® MOVEit® Transfer and Progress® MOVEit® Cloud customers**

Take advantage of managed file transfer for your edge devices and frontline workers. Progress® MOVEit® Mobile enables workers with iOS and Android devices to share pictures, documents, forms and other files directly from their smartphones or tablets while providing IT the security, visibility and control they need to meet compliance requirements and run their business with confidence.

Enables Mobile Users to Participate in Business Processes

Familiar MOVEit secure file transfer capabilities are available for mobile users, including the ability to:

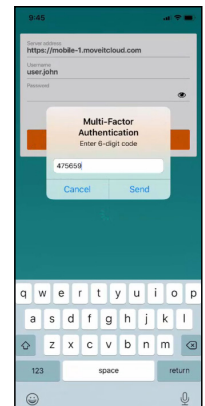

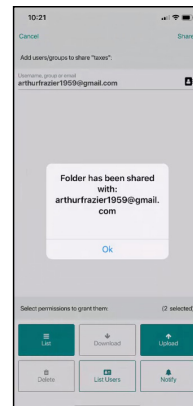

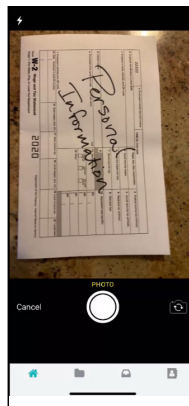

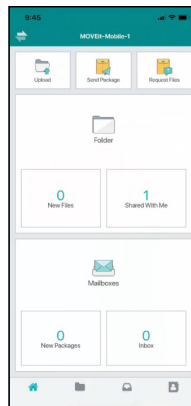

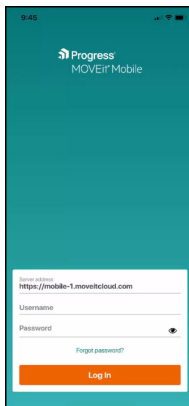

- Access and transfer files
- Send and receive packages
- Leverage secure sign-on and folder management
- Use Single Sign-On (SSO)
- Enable optional Multi-Factor Authentication (MFA)
- Facilitate secure folder sharing with granular permission assignment
- Initiate person-to-person, person-to-system and system-to-person transfers

Supports Most Popular Devices and Native Applications

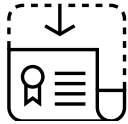

- Access MOVEit Mobile on iOS and Android devices, including tablets
- Capture and securely share photos taken on the device

Promotes Visibility and Control Over File Transfer Processes

- Control mobile user access and enable single sign-on via SAML 2.0 integration to identify provider systems
- Get unique insights on file transfer activities with audit and reporting

Common MOVEit Mobile Use Cases

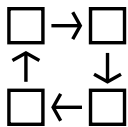

Insurance

An insurance adjustor can securely transfer documents and images from their tablet using MOVEit Mobile. While still at the accident site, they can initiate the automated insurance claim review workflow process, saving time and improving productivity. Previously, they would need to return to the office to securely access internal systems, use a complex FTP client from a remote desktop, rely on inherently insecure email or mail documentation within a paper-based process.

Healthcare

A doctor can take a picture of a patient's infection with their cell phone and send it securely as part of a patient record update process. The medical records department is then alerted about the picture and can add text information like the medical record number and upload it to the patient record. It can also send the picture to the practice management system. The pictures are made available to assisting specialists within the practice and instantly offer important context for collaborative treatment that was not previously possible. The process is compliant with HIPAA/HITECH standards.

Distribution

A sales representative at a customer site can securely generate and deliver an approved price quote document, initiating the process from their tablet. Once approved, the price quote is automatically and securely delivered to the client and the internal business systems are updated with information from the quote. This process reduces the time for quote generation and approval and helps maintain security for sensitive pricing and customer information at every step of the process.

Oil and Manufacturing

An engineer can securely access shared large unstructured data files such as geophysical information, equipment specifications or designs remotely on their tablet. The engineer can be anywhere in the world and view any file they are authorized to access right from their iPad or Android tablet. User access is centrally managed, and files can be shared and automatically deleted on a pre-determined expiration date.

Finance

Executives and managers in financial services companies need secure mobile access to critical financial and portfolio information. MOVEit Mobile allows executives to securely access sensitive financial documents and reports from their mobile devices. Additionally, financial reports can be automatically generated and securely transferred to appropriate executives. If the files are not accessed within a pre-determined timeframe, they are automatically deleted or can be set to delete automatically after a pre-set number of views. MOVEit Mobile frees executives to do business wherever they are: at a client location, on a business trip or even on the way home from work.
