

WS_FTP® Server Web Transfer Module

Industry-Leading Security Meets the Ease and Convenience of the Web

DATA SHEET

KEY BENEFITS

- ✓ Web-administration interface accessible from an Internet-enabled computer
- ✓ Fully compatible with today's top browsers, such as Microsoft Edge, Firefox, Google Chrome and Safari
- ✓ View all files and folders on the server that you have access to
- ✓ Transfer files over HTTP and encrypted HTTPS protocols
- ✓ Upload files from your computer to the company server
- ✓ Multi-Factor Authentication for added security
- ✓ Download files from the server to your PC

Now, with the WS_FTP Server Web Transfer module, the world's most popular secure file transfer solution becomes faster, easier, and more universally accessible.

If your organization is looking to improve the ease and security of your file transfer processes, the WS_FTP Server Web Transfer module:

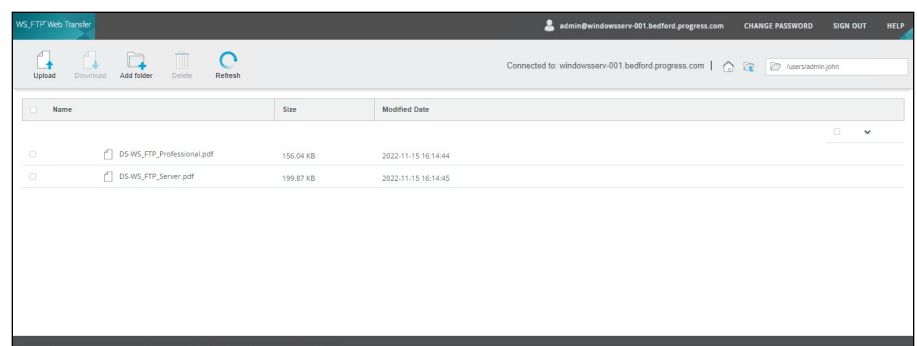

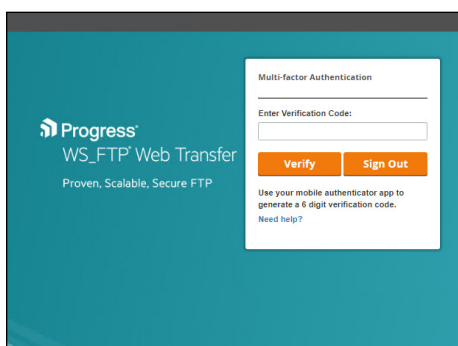

- Delivers a web-based module for the industry-leading WS_FTP Server Premium Edition
- Gives centralized web administration, management, and deployment
- Allows users to easily upload and download files and to create and delete folders on the remote server
- Delivers full compatibility with today's top browsers (Microsoft Edge, Firefox, Google Chrome and Safari)
- Improve the user experience with a simple, intuitive, and secure way to quickly transfer files to other people.

How It Works

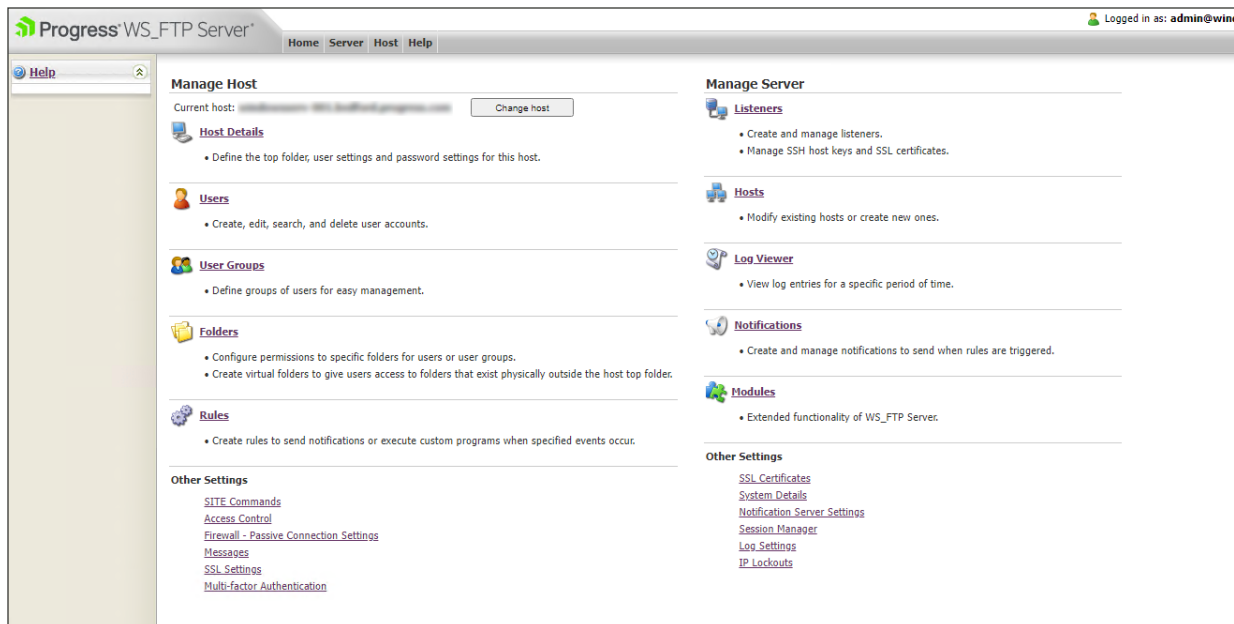

WS_FTP Server web transfer module, available in the WS_FTP Server Premium Edition, enables authorized users to securely transfer files between their computers and company servers using the convenience of a web browser.

The Result

A simple and secure solution that enables employees and external business partners to connect to company networks and share files and data.

Authorized end users can login to the web interface and securely upload and download files to WS_FTP Server

Administrators authorize which users can connect to WS_FTP Server Web Transfer module

File transfer just got a whole lot easier

WS_FTP Server Web Transfer module simplifies the process of moving and sharing files. No more having to deal with the inefficiencies and security concerns related to email and instant messaging, or the need to manually install, manage, and maintain file transfer software on end user's desktops. The Web Transfer module gives users a simple file transfer interface that works on any browser and operating system, so authorized people can securely upload or download files, or even create and delete folders on the remote server.

Simple administration

WS_FTP Server Web Transfer module also delivers centralized web administration and deployment. To implement, WS_FTP Server administrators simply enable Web access on the WS_FTP Server administration console and all user settings, such as password rules, file/folder permissions, disk quotas, and more, are all automatically enforced. And because the Web Transfer module runs within the Web browser without any software to install, end users simply enter the URL or save it and access it as a browser favorite.

The industry's most secure data-transfer solution

WS_FTP Server Web Transfer module offers the same leading security you've come to expect from WS_FTP Server. Files are transferred over the encrypted HTTPS protocol, which completely protects files as they are being sent from an end user's computer and the company server. Server administrators define who is authorized to connect to WS_FTP Server with the WS_FTP Server Web Transfer module. All of their account settings and permissions on WS_FTP Server are applied so the user can access their account, files, folders, and virtual folders just as if they connected with traditional desktop FTP or SSH client software.

Risk-free, flexible file transfer

WS_FTP Server Web Transfer module runs on the server and can be accessed by end users via today's top browsers, including Microsoft Edge, Firefox, Google Chrome and Safari. Not only does this mean you won't have desktop software to install, update, and maintain, but you won't have to train employees on new software. And with an unlimited-licensing structure, there is no maximum to the number of people that can use the WS_FTP Server Web Transfer module.
