

Progress DataDirect Speeds Cloud Migration Solutions Development for PruTech

AT A GLANCE

PruTech

PruTech is an IT services company that helps its clients implement digital transformation solutions, with a focus on cloud migration that often involves sensitive data. Using Progress®DataDirect® OpenAccess™, PruTech was able to build Secure Database Gateway, a solution to automate complex encryption processes, speeding the cloud migration process.

Challenge

When a major healthcare insurer approached PruTech to implement a solution to migrate hundreds of applications containing sensitive data to the cloud, PruTech set out to develop an automated solution that could scale to the task.

Solution

Develop Secure Database Gateway, built with Progress OpenAccess, to seamlessly enforce data encryption policies and rules based on who is accessing the data.

Secure Database Gateway is an industry-agnostic ODBC JDBC gateway that can scale across industries and environments.

Leverage best practices and methodologies from Progress around how environments are set up and how development tools are built.

Results

In production for three years, Secure Database Gateway has proven its worth, speeding cloud migration in data sensitive environments.

Secure Database Gateway has a proven ability to scale from a single application to hundreds, streamlining cloud migration efforts.

Using Secure Database Gateway, customers have saved months of development time, realizing significant cost benefits.

“Additionally, speed to market and the centralized management and monitoring capability also allows this customer to scale the solution from one application to hundreds of applications.”

Birender Saini

Executive Vice President of Enterprise Technology Services, PruTech
