

# CGI Brings Profio360 ERP Into the Future with OpenEdge

CGI's Profio360, an ERP solution for construction and manufacturing, was originally built on Progress OpenEdge 37 years ago, and despite temptation and pressure over the years to migrate the application to another, more well-known platform, CGI chose to continuously evolve and modernize Profio360 on OpenEdge to meet the changing needs of its customers.

Finland

## CHALLENGE

Ensure Profio360, built on OpenEdge 37 years ago, keeps ahead of changing customer needs.

## SOLUTION

**OpenEdge:** Through a steady, focused modernization approach, CGI has evolved its OpenEdge ERP solution to adapt to ever-changing customer needs

**OpenEdge:** Due to its flexibility, OpenEdge enables Profio360 customers to choose and deploy only those features that are a priority for them.

**Kendo UI:** CGI used Kendo UI to deliver the personalized interactions and exceptional user experience its clients were seeking

## RESULTS

Transformed its character-based screens into highly-intuitive visual interactions

Productized its API layer making the OpenEdge data available to connect with other CGI solutions and BI, analytics and reporting solutions

By detaching Profio360's business logic from the interface, clients can now choose any interface they desire without the need to change clients

“Because the OpenEdge database is such a reliable and capable platform, there's been no actual need to change it to anything else.”

**ANNA LEHTORANTA**  
CGI ACCOUNT GROWTH EXECUTIVE

Make better JavaScript apps faster with Kendo UI. Quickly build eye-catching, high-performance apps—regardless of your JavaScript framework choice.
