

NetSuite Improves Application Connectivity and Integration with DataDirect

AT A GLANCE

NetSuite needed application data connectivity demanded by existing customers and by the market at large. Progress® DataDirect® OpenAccess™ SDK solved this problem, supporting an extensive breadth of standards and implementations.

CHALLENGE

Provide clients using the company's hosted software with data connectivity from their applications to other deployed applications.

SOLUTION

Generate a custom driver in 2 hours using our prebuilt addons or develop directly against SDK interfaces

Improve efficiency and speed with optimized query execution completed by an OpenAccess SQL Engine

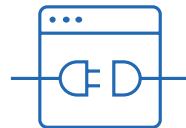

Provides the fastest way to make your application compatible with data-centric tools, such as BI and analytics, ETL and more

RESULTS

Provided clients with better data connectivity and application integration

Accelerated the development of custom ODBC drivers

60% of customers give drivers built with OpenAccess SDK a 4/5 or 5/5 rating

"We've had our customers tell us that they absolutely need the ODBC drivers built via OpenAccess SDK. They've specifically told us 'don't even think of removing it'."

NETSUITE REPRESENTATIVE

DataDirect OpenAccess SDK offers a high-performing, secure and reliable connectivity solution for ODBC applications to access any data source or API data.
