

# Apero Upgrades its OpenEdge-Powered Platform to Continue Delivering Effective Software Solutions

AT A GLANCE

Apero Solutions is a software development company that develops software solutions for wholesale distributors and is a 30 plus year-long Progress® OpenEdge® customer. As the Canadian-based company undertook a modernization initiative, it leveraged their knowledge of OpenEdge and utilized version 12.2's unique features. Following completion, Latitude ERP, the company's most prominent product, now has a new UI to help expedite the development processes on the platform.

Canada

## Challenge

Apero Solutions saw an opportunity to provide its customers with more robust ERP software that reflected customers' modern development needs.

“OpenEdge has always been a development environment that allows for a faster time to market. One of the challenges we've faced with introducing a browser-based UI and new development tools is understanding that time to market is not as fast as we were used to when we just had Progress development as the only component of a finished product.”

**Oscar Perez**

Director of Software Development, Aperio Solutions

## Solution

Upgrade to the latest version of OpenEdge to migrate to a unique environment.

Stage a demo environment to make sure that the new OpenEdge implementation will work.

Create a new user interface for not only marketing purposes but to improve the overall user experience.

## Results

Apero users can now access the Latitude solution on mobile devices.

An accelerated development cycle on new modules which allowed for quicker deployment.

A new, responsive user interface enabling customers to have a more intuitive and productive working environment.

Upgrading your platform to a cloud-based environment can be beneficial to your organization.
