

**Course title**

*Getting Started with Progress Rollbase*

---

**Course duration**

Equivalent to 8 hours of instructor-led training

---

**Audience**

This course is for application developers who are responsible for developing applications using Progress Rollbase.

---

**Description**

This course introduces you to Progress Software's cloud application-development platform, Rollbase. It discusses the features of the two platforms of Rollbase—Hosted cloud and Private cloud. The course describes the components of a Rollbase application and teaches how to create a basic Rollbase application using objects, fields, and relationships. The course also teaches how to modify default pages and views of a Rollbase application. In addition, the course teaches how to define a workflow for an object in a Rollbase application.

The materials that you receive with this course include an Exercise Guide and a CD with solutions.

This course is available, at no cost, as [Recorded Online Learning](#).

---

**Version compatibility**

This course is compatible with Progress Rollbase 3.0.

---

**Role-based learning path**

This course is a part of the following role-based learning path:

- Rollbase Developer
-

## What you will learn

After taking this course, you should be able to:

- Describe the features of Rollbase.
  - Describe the components of a Rollbase application.
  - Log into the Rollbase private cloud.
  - Create a Rollbase application.
  - Create objects for a Rollbase application.
  - Create fields for objects in a Rollbase application.
  - Create relationships between objects in a Rollbase application.
  - Create and configure views in a Rollbase application.
  - Create new pages in a Rollbase application.
  - Add and rearrange fields on a page.
  - Add and modify properties of a section on a page.
  - Create and add components to a tab on a page.
  - Develop a basic workflow for an object in a Rollbase application.
  - Change the default settings of a workflow action.
  - Create an email template.
  - Configure a workflow action to send template-based emails.
  - Create an Update Field trigger.
  - Configure a workflow action to run triggers.
- 

## Prerequisites

Students should meet the following prerequisites:

- Basic knowledge of components in software applications
-
