PROGRESS® Rollbase®

PROGRESS® ROLLBASE®

OVERVIEW

Your business is constrained in its ability to acquire state-of-the-art technology, has limited technical expertise or needs to offer differentiated services. You have discovered that your current on-premises business model is compromised and your application needs to move to the cloud in order to keep up. You need to build, publish and deploy both **Web-based and Mobile applications** easily and securely on the infrastructure of your choice. Introducing Progress Rollbase, a cloud-based development/deployment platform for the rapid creation of business applications.

WHAT IT DOES

Progress Rollbase enables you to build all of your business applications in one place from the comfort of your Web browser while writing a minimum amount of code (typically 80% clicks, 20% code). Reduce your development time and resource requirements, accelerate your time-to-market, simplify application delivery and deployment, and provide a proven cloud platform on which to build all of your custom business applications. With Progress Rollbase, you are in complete control.

BENEFITS

EASY TO LEARN AND USE

Most tech-savvy business users, IT professionals, and developers learn how to design Progress Rollbase applications in just a few hours. **All you need is a browser and an Internet connection**. Progress Rollbase applications are created entirely within your browser and require no additional software. You can quickly get started by using our pre-built sample applications or by building your own.

MINIMAL CODING, MODEL DRIVEN

You no longer need to be a programmer to create applications. Use simple **point & click wizards** to define your application's data model, object, views, charts, reports, workflows and more. Customize your applications' user interface by using a powerful **drag & drop page editor** to create, configure and re-arrange components on the fly. Use innovative and flexible portal technology to extend applications beyond the backend for enabling sophisticated external-facing portals that integrate with your website or intranet.

ANYTIME, ANYWHERE ACCESS

All Progress Rollbase applications run natively on the Progress Rollbase platform as on-demand services as soon as they are built without any manual deployment required. **Deploying applications is just a matter of adding users and assigning permissions.**

HIGHLIGHTS

▶ **Runs anywhere, no vendor lock-in**: Deploy applications in private or public cloud environments

▶ Provides library of **pre-built sample application templates**

▶ **Automated migration tools/templates**

▶ **Custom branding and App Store** for ISVs and Resellers

▶ **Connect seamlessly to existing Progress-based applications** and other SaaS business applications

▶ **Connect to several external Data Sources**: Easily connect your Rollbase application to existing data sources with DataDirect Cloud

▶ **Build personalized mobile apps**: From the comfort of a browser, build state-of-the-art mobile apps

PROGRESS

Users only need access to an Internet connection and an up-to-date browser to use your new application. Progress Rollbase applications integrate with each other once deployed. Applications that include portals can also be seamlessly integrated into your company's website or intranet.

HOSTED OR INSTALLED

Design, develop and deploy custom cloud business applications on Progress servers with **Progress Rollbase Hosted Cloud** or on any other infrastructure such as Amazon, Rackspace, Joyent, Microsoft Azure and on-premises with **Progress Rollbase Private Cloud**.

SECURE, RELIABLE AND AVAILABLE

As an administrator **you have complete control** over who can access applications, tabs, objects and their components, such as pages, views, charts and workflow actions. Progress Rollbase provides a **central management system** which allows you to easily create and manage any number of tenants (i.e. customers) across any number of application and database services. In addition, Progress has partnered with Amazon Web Services to provide **24x7x365 monitoring** of the Progress Rollbase Hosted Cloud. We are alerted immediately in the event of any planned or unexpected service disruption.

ABOUT PROGRESS ROLLBASE

Progress® Rollbase® is a cloud platform for development and delivery of software as a service (SaaS) business applications using point & click, drag & drop tools in a standard browser with a minimal amount of code. Progress Rollbase delivers on the promise of rapid application development (RAD), making application creation much faster than traditional software development methods. Progress Rollbase is offered as both a hosted service (Progress Rollbase Hosted Cloud) and as an installable product (Progress Rollbase Private Cloud) that can be deployed on any cloud infrastructure or on-premises. Progress Rollbase is designed for enterprises as well as independent software vendors (ISVs) with a complete system for tenant and subscriber management, provisioning, application development, publishing and deployment. Progress Rollbase provides ISVs and resellers with complete white label capabilities making it easy to deploy applications under any brand or identity. For more information about the Progress Rollbase platform, please visit www.progress.com/rollbase.
