

Leverage Your SharePoint Investment in a Digital World

5 Benefits to Using a Content Management System with SharePoint

SharePoint facilitates content creation among groups and provides an infrastructure to manage the content, but it's limited when it's time to share that content with the digital world.

Enter Content Management Systems (CMS)

Often seen as a replacement to SharePoint, a CMS is actually complimentary. Integrating a CMS, like Progress® Sitefinity™, with SharePoint enables quick and efficient delivery of content via the web and mobile.

1 It's Easy

Deliver current content with confidence and ease. The right CMS is simple to integrate and provides flexible design options and tools that enable you to update your site without affecting content stored in SharePoint.

2 It's Mobile

Reach your customers wherever they are. A modern CMS incorporates responsive design capabilities so you can deliver content seamlessly on mobile devices.

3 It's Scalable

Create as many sites as you need and use the same content across them all. And, with Office 365 and Microsoft Azure, do it without added infrastructure complexities.

4 It's Discoverable

Customers can find you more easily because SEO is built into a CMS, while SharePoint search capabilities don't extend outside the platform.

5 It's Secure

Build and manage your website with a CMS, and maintain governance of content source files when integrated with SharePoint.

About Progress
