

Beaumont ACO Makes Patient Data Management Simple, Compliant and Mobile for 2,000 Physicians with Progress Sitefinity

AT A GLANCE

Beaumont ACO

A Physician/Health System Partnership

When Beaumont ACO sought to give their physicians a single portal to upload and manage documents and reports, create two-factor control on document access to ensure HIPAA compliance, provide a mobile application for physicians to have secure information access on the go, and serve as the preeminent mode of communication and education for its 2,000 physicians, it turned to Progress® Sitefinity® for its website redesign, portal development and native mobile application build out.

Challenge

As Beaumont ACO sought to build a portal to connect and educate its 2,000 physicians, and a mobile application to allow for report and patient data access on the go, it needed assurance that it was HIPAA-complaint, the tools allowed for easy information upload for physicians and wouldn't require documents to be updated in both the portal and the app.

“The primary benefit of utilizing Sitefinity is that it gives us a single place for physicians to go for the most updated information. The other benefit would be tighter control over protected health information for our patients. It's single-spot, secure, HIPAA-compliant cloud servers and setup.”

Steven Maney

Director, Clinical Analytics and Decision Support, Beaumont ACO

Solution

Create course content that is pushed out to physicians in Sitefinity to manage Beaumont ACO's Learning Management System (LMS).

Migrate the existing CMS-based website to Progress Sitefinity, build the portal and develop a mobile application to allow physicians access to patient information and reporting on the go.

Leverage document management widgets created in Sitefinity into mobile, responsive templates. While the native app was created from scratch, everything else in the portal was pulled through Sitefinity.

Results

The portal and application are now serving as the preeminent mode of communication and education for Beaumont ACO's 2,000 physicians.

The mobile application has seen a 119% increase in users, to more than half of Beaumont ACO's physicians, since it was built last year.

Sitefinity allows Beaumont ACO to house all of its financial information to align with its goal of being fully transparent with its doctors, and allows for the identification of gaps in care.
