

Boost Your Cyber Resilience: Unified Network Monitoring and Data Backup Solution

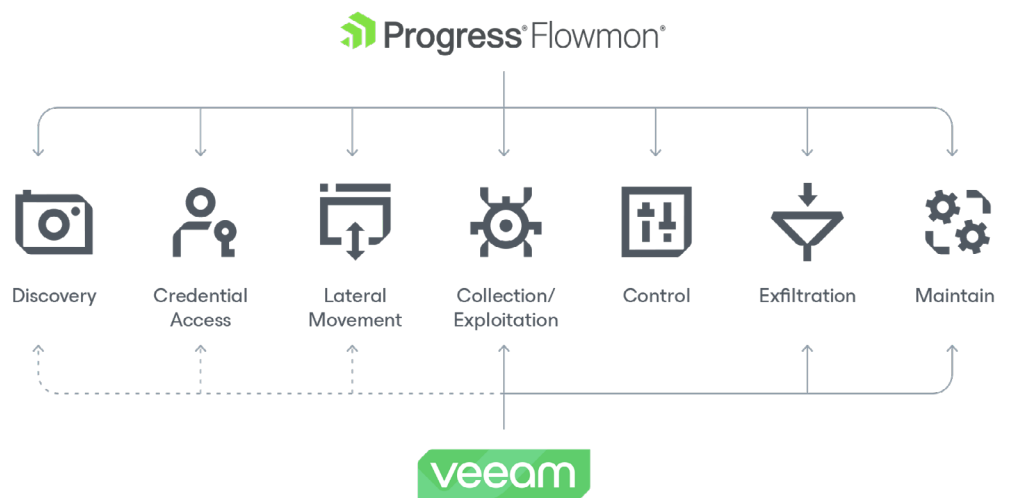

JOINT OVERVIEW

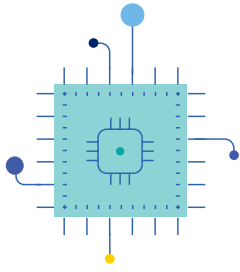

Veeam provides backup solutions to keep your data safe and recoverable. Progress Flowmon is one of the market leaders in network detection and response (NDR), taking care of keeping your data safe and secure within your corporate network.

With the volume of cyberattacks rapidly increasing, enterprise customers need a strategy that encompasses the necessary visibility and associated actions to protect business data.

The integration of Flowmon and Veeam offers a unified solution for maximizing cyber resilience by combining advanced network detection and response (NDR) capabilities with robust backup and recovery systems. This joint solution enables organizations to detect, respond to and recover from cyberthreats more efficiently, reducing the time and cost associated with data breaches.

For most attacks in the early stages, threat actors use special techniques like port scans, brute force, etc., which can be detected as fingerprints at the crime scene. The same applies to more advanced attack techniques — threat actors leave their fingerprints in the network. Flowmon is designed to catch these early-stage indicators and allows Veeam Backup and Replication to proactively respond to business-critical data.

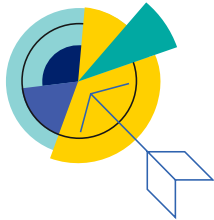

What will I get with this solution?

- Enhanced Application Delivery
- Application Resilience and Performance
- Application Protection and Access Control
- Enablement of Multi-Cloud Applications

Why may you need it?

- Your company owns and operates business-critical IT applications and infrastructure.
- Your company operates or stores sensitive data.
- Your company have wide and diverse network infrastructure that may include hybrid, cloud, branch offices or remote workers.
- Your company experiencing serious growth in employee, infrastructure or capitalization during the last 6-24 months.

Common Goals. One Solution.

The Flowmon and Veeam integration represents an enterprise-ready cyber defence solution, providing organizations with the tools they need to detect, respond to and recover from cyberthreats efficiently. By combining real-time network monitoring with robust backup and recovery solutions, this integrated approach improves and maintains your defences against evolving cyberthreats.

To learn more about this joint solution, call your **Veeam or Progress** sales representative.

About Progress

Progress (Nasdaq: PRGS) empowers organizations to achieve transformational success in the face of disruptive change. Our software enables our customers to develop, deploy and manage responsible AI-powered applications and experiences with agility and ease. Customers get a trusted provider in Progress, with the products, expertise and vision they need to succeed. Over 4 million developers and technologists at hundreds of thousands of enterprises depend on Progress. Learn more at www.progress.com
