

Progress MarkLogic and Semaphore Help Broadridge Streamline Post-Trade Processing

AT A GLANCE

Broadridge, a global Fintech leader, sought a streamlined way to manage post-trade processing for its multinational banking customers. Broadridge selected Progress® MarkLogic® and Progress® Semaphore™ Semantic AI to deploy a data fabric at the heart of the company’s service offering for Global Post-Trade Management (GPTM).

COMPANY Broadridge	INDUSTRY Financial Services
PRODUCT Progress MarkLogic Progress Semaphore	COUNTRY United States

Challenge

Broadridge needed a streamlined way to manage post-trade processing for its multinational banking clients. Post-trade processing involves settling ownership agreements and making securities and cash transfers after a transaction, while ensuring that customers’ transactions meet investment restrictions and regulations.

“The Data Fabric allows us to create efficiency and high-throughput performance by staying lean and fit-for-purpose.”

VP Platform Architecture, Broadridge

Solution

Progress MarkLogic and Progress Semaphore to deploy a data fabric for Post-Trade Management

Solution supports the integration, access, processing, publication and persistence of disparate data, unifying discrete data sets

Solution provides a common operating platform to power the business functions within the GPTM system

Results

Supports structured and unstructured data and metadata, and enables rapid onboarding of new customers from different trading systems

Captures snapshots of a transaction across time in a manner that adheres to regulation and compliance requirements

Enterprise-grade data management capabilities ensure high performance, scalability and security for daily ingestion of 1+ million documents

Need a streamlined and secure way to efficiently manage complex data and transactions? Talk to us.
