

# YOUR DATA DESERVES BETTER...

Data is the fuel that will power your organization's future success. It is the most valuable asset across all your activities – from R&D to production to customer service – and it drives your mission critical business decisions.

**You invest in your assets and machinery...  
why are you ignoring your data?**

## Three Signs Your Data Isn't Working For You

- 1 Can't deliver the products and services your customers need**  
Your workers need fast access to the right information so they can design and deliver the best, highest quality, and safest products to your customers. Wasting time finding data – and not leveraging assets you already have – holds you back from being there for your customers.
- 2 Can't navigate the complex, changing business environment**  
You've adopted great ERP systems, new material and asset systems, and PLM innovations – but can't connect the dots across them to see the big picture and respond to external and internal challenges.
- 3 Can't transform for the future**  
You're lacking the seamless access to information across every part of the manufacturing process that you need to support the radically different business of the future – where delivering goods turns into services, and the physical supply chain turns digital.

If this is your reality, you need MarkLogic® – the world's best database for integrating data from silos.

“ MarkLogic is the tool for us. Our traditional tools just didn't work. It's not that they're bad, they're just not made for what we're trying to do.

Allen Muller, Manager, Enterprise Information Architecture, Eaton

## Industry 4.0 Organizations Trust MarkLogic

Overcoming these challenges requires a database platform that lets you connect data across every part of the manufacturing process and get a single view of the things you care about – while keeping your costs under control.

MarkLogic does just that – letting you easily integrate your silos of data, providing traceability across your supply chain, and enabling rapid delivery of a host of internal and customer-facing applications.

With support for secure operations, accurate reporting and analysis over the full lifecycle of data, the agile MarkLogic platform makes it easier to adapt to changes, innovate faster than ever before, and industrialize your data to make it the critical asset for your future.

## Industry 4.0 Organizations Succeed on MarkLogic

### Autoliv

Autoliv, with more than 67 facilities in 28 countries, produces materials to improve safety and prevent accidents. MarkLogic helps ensure the company's manufacturing data is quickly, easily, and affordably maintained, searchable, and secure. With MarkLogic, Autoliv can conduct queries and reports in record time, quickly answering questions that were previously too difficult to address.

### Eaton

After years of M&A activity, global manufacturer Eaton found itself with a complex BI landscape consisting of more than 100 ERP systems. The company decided to create one centralized integration hub to consolidate these systems – but found ETL and RDBMS were too inflexible and costly. Eaton solved their challenge by implementing MarkLogic to help the company run more efficiently and better track, manage, and sell its seven million products.

### Cisco

Cisco needed Google-like search and delivery of its technical documentation for 30 years' worth of developed and acquired products. MarkLogic powers the company's new Content Hub, quickly and easily integrating over 80 thousand URLs with dense information such as tables and charts. Cisco now has a foundation to easily incorporate new products in the future, meet its searchability goals, and improve customer service.

## Let MarkLogic Help You Unify the Digital Thread

As the world's best database for integrating data from silos, MarkLogic's database platform empowers our manufacturing customers to more quickly achieve a unified, 360-degree view of their data – at less cost.

Learn how we can help you integrate your data to improve operational efficiency, support new business models, and lay the foundation for digital transformations to come.
