

2022 Annual OpenEdge Product Roadmap Survey

Your voice is shaping the future of OpenEdge.

The Annual OpenEdge Product Roadmap Survey is designed to obtain direct feedback from our everyday product users to hear more about their experiences with OpenEdge. The OpenEdge team received excellent feedback on the product's path forward from our most recent survey in 2022, which had 321 responses from countries worldwide across multiple distinct industries.

Why does your voice matter in the Annual OpenEdge Product Roadmap Survey?

As someone who is closely involved with leveraging the OpenEdge platform, your opinion matters. The OpenEdge team takes the feedback collected from the survey and works to improve the product in response to customer demands.

The survey also invites survey respondents to weigh in on the applicability, relevance, and value of some of the proposed improvements under consideration by the OpenEdge team. Participants in the survey have interacted with OpenEdge in various capacities over the years, and you have the knowledge and experience to help make the product better.

About The Survey

Purpose

Gain deeper insights into the utilization of OpenEdge

Solicit input from customers to inform the future Roadmap & guide OpenEdge R&D priorities

Discover new trends and unmet needs

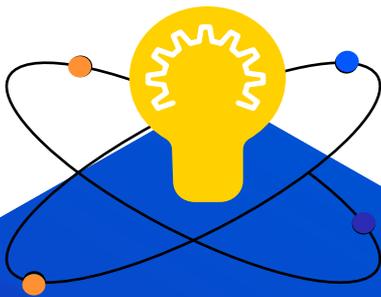

Logistics

Survey began August 25 and closed November 11, 2022

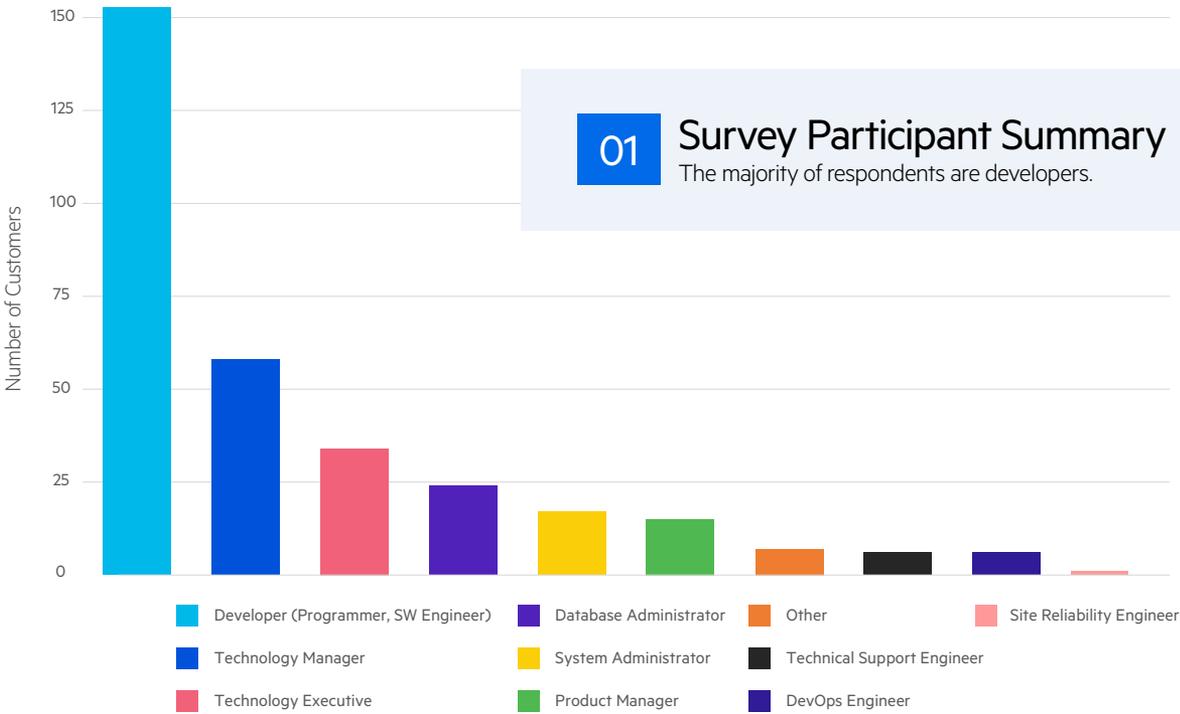

Results

321 individuals responded - **Thank You!**

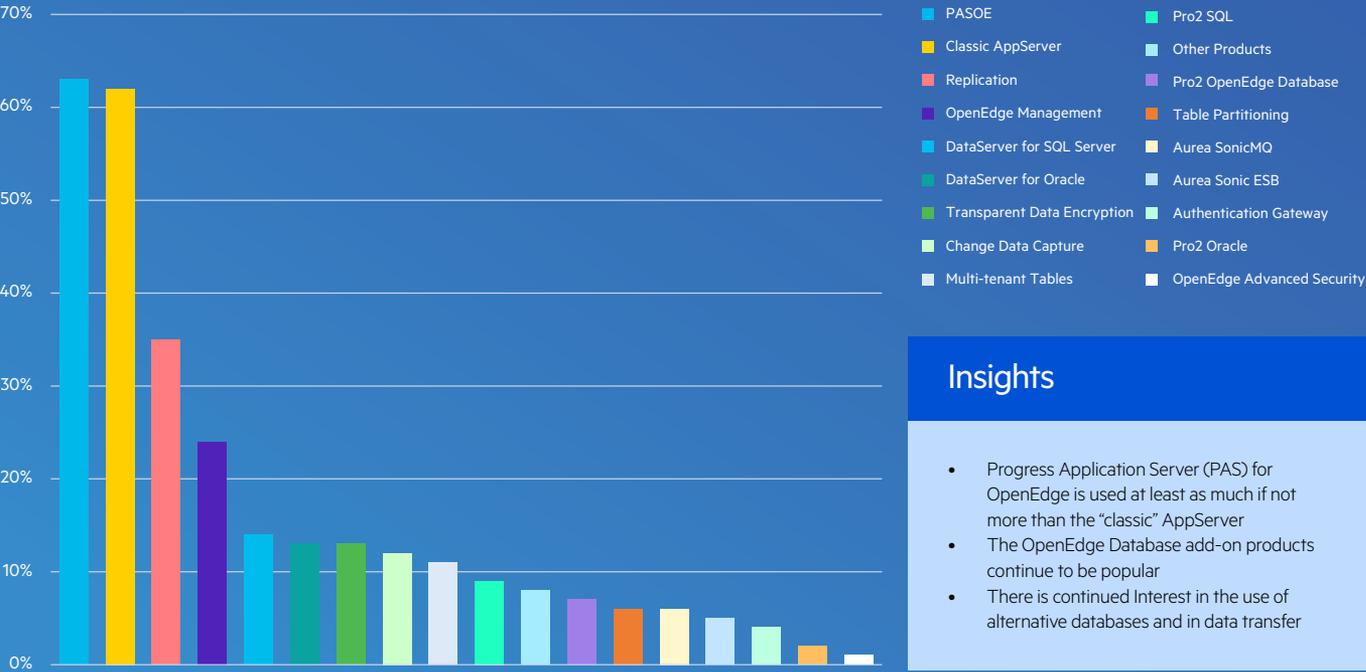

Key findings from the 2022 OpenEdge Product Survey

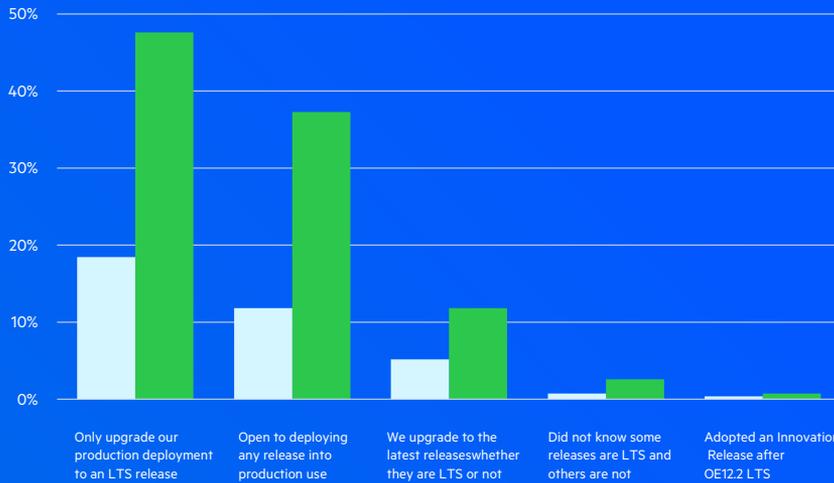

02 Products Used in Production

A key trend is the migration to Progress Application Server (PAS) for OpenEdge.

Insights

- Progress Application Server (PAS) for OpenEdge is used at least as much if not more than the "classic" AppServer
- The OpenEdge Database add-on products continue to be popular
- There is continued interest in the use of alternative databases and in data transfer

03

LTS vs Innovation Releases

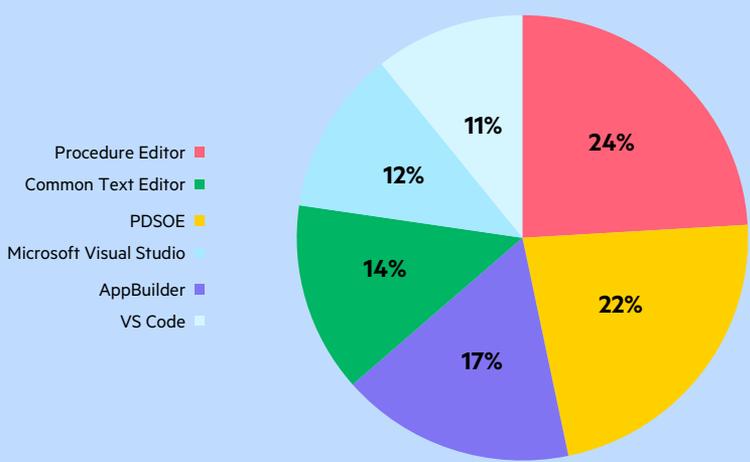

The majority of respondents are developers. About half of the customers are open to adopt Innovation Releases (about 20% actually adopt.)

- Managers and Executives
- All

OE Release Adoption – Ideal Timeframe

04

The majority of respondents are interested in upgrading to OpenEdge more frequently and would like to adopt a new release within 3 months.

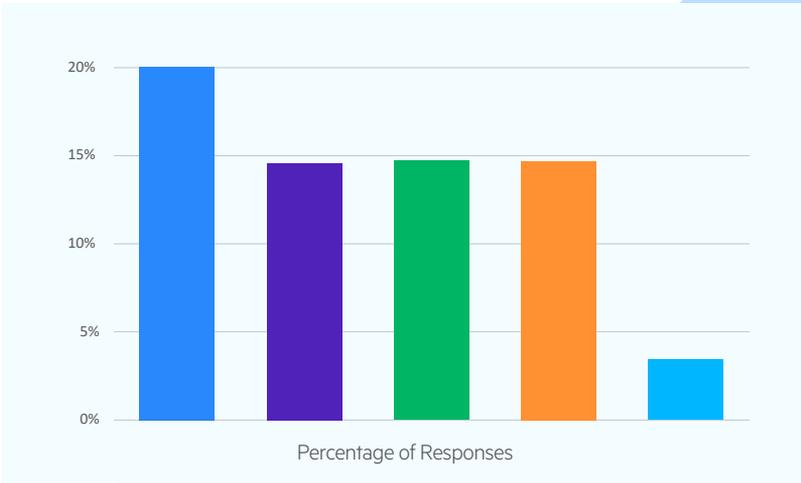

05

Development Tools Used

The legacy Procedure Editor and AppBuilder continue to be used stand-alone, even though they are available in PDSOE.

Development Tool Features

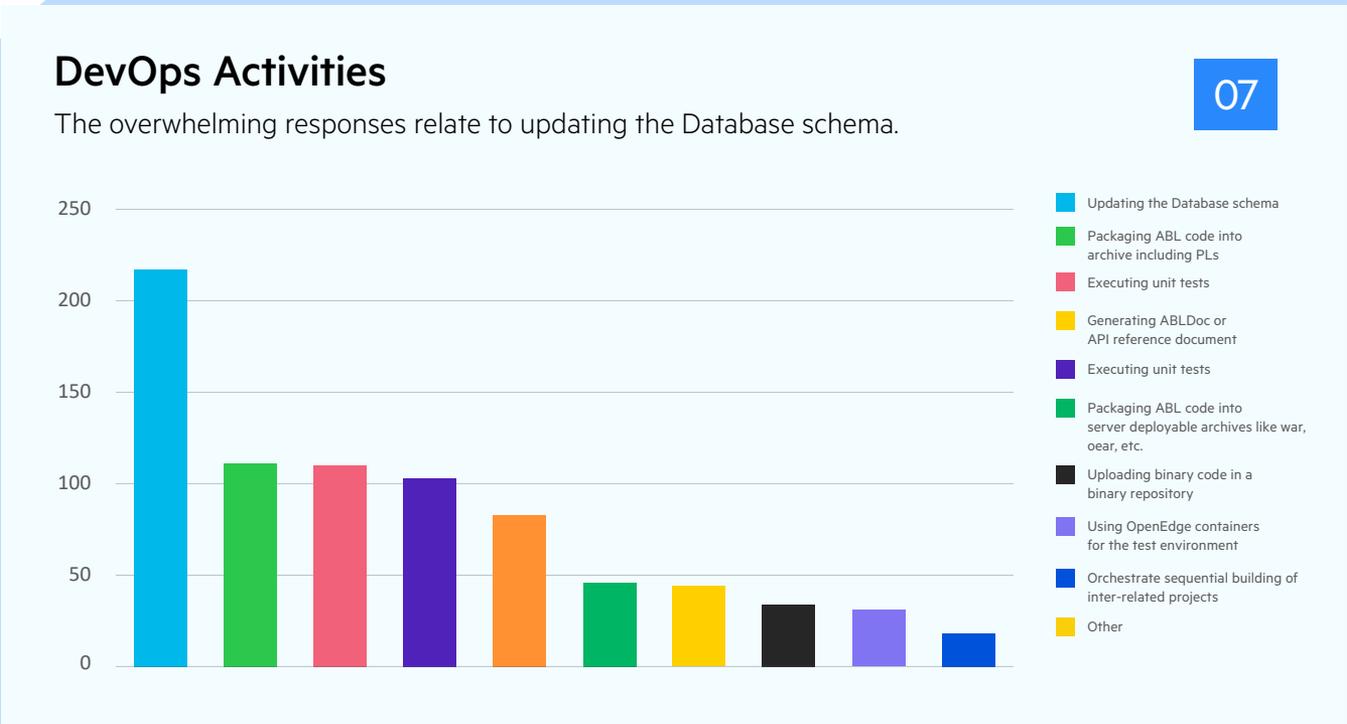

The majority of respondents say that the most prominent preference is for code analysis.

- Code Analytics for code organization and interdependencies
- Intelligent code refactoring
- Development in the IDE of your choice
- Profile and visualize memory allocation
- Other

DevOps Activities

The overwhelming responses relate to updating the Database schema.

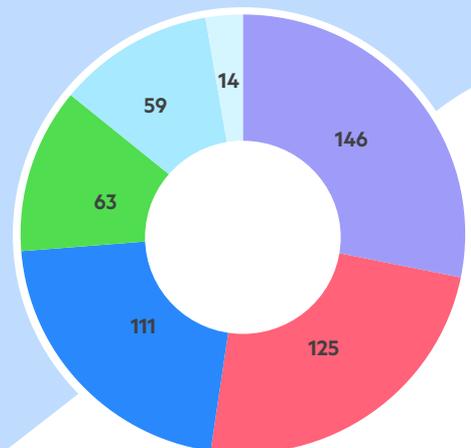

- Updating the Database schema
- Packaging ABL code into archive including PLs
- Executing unit tests
- Generating ABLDoc or API reference document
- Executing unit tests
- Packaging ABL code into server deployable archives like war, oear, etc.
- Uploading binary code in a binary repository
- Using OpenEdge containers for the test environment
- Orchestrate sequential building of inter-related projects
- Other

DevOps Requirements

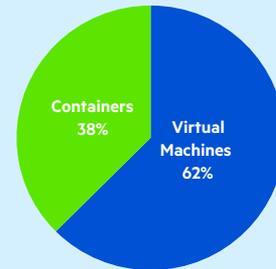

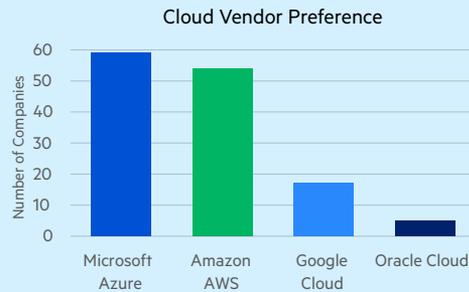

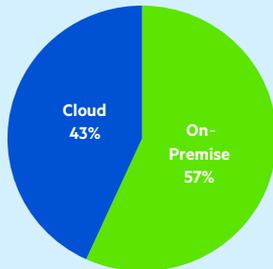

The OpenEdge DevOps Framework currently solves the top three DevOps problems.

- Reduce time to build OpenEdge applications
- Simplify management of application dependencies
- Generate deployable packages during the build process
- Automate Container-based test environment creation including server and database
- Consistent DevOps for applications based on different OpenEdge versions
- Other

Deployment Preferences in 2023

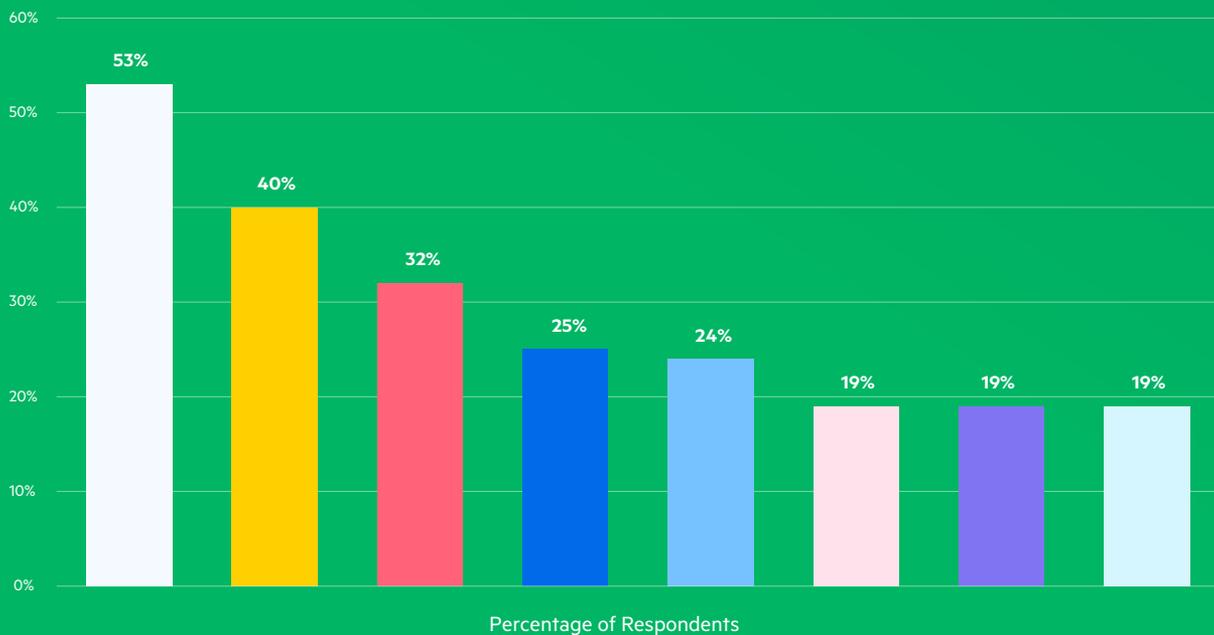

On-premise servers and virtual machines continue to be the choice for deployment among respondents. There is also interest in a variety of Cloud providers.

10

OpenEdge Command Center Database Management Features

The highest interest is in configuring database startup settings, and there is also clear support for managing settings for security and for the database add-on products. OpenEdge Command Center is a modern cloud-ready web-based console to manage OpenEdge resources.

Config of all DB startup parameters

Support for Change Data Capture

Support for Table Partitioning

Manage user security for a DB

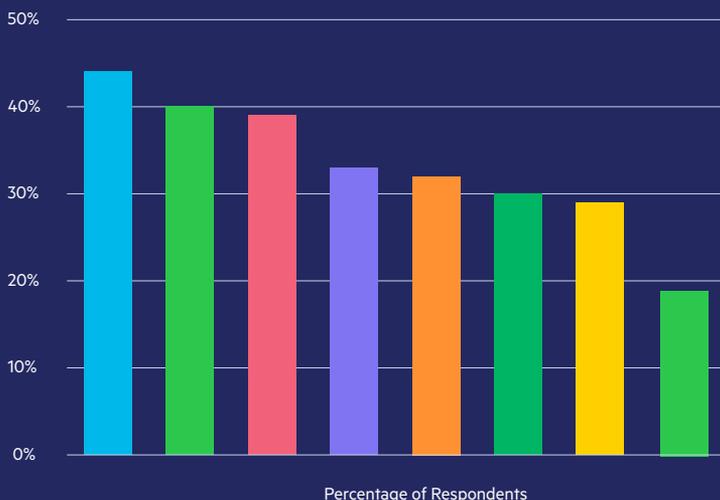

Support for Transparent Data Encryption

Support for Multi-tenancy

Ability to create DB from scratch

Support for Dynamic Data Masking

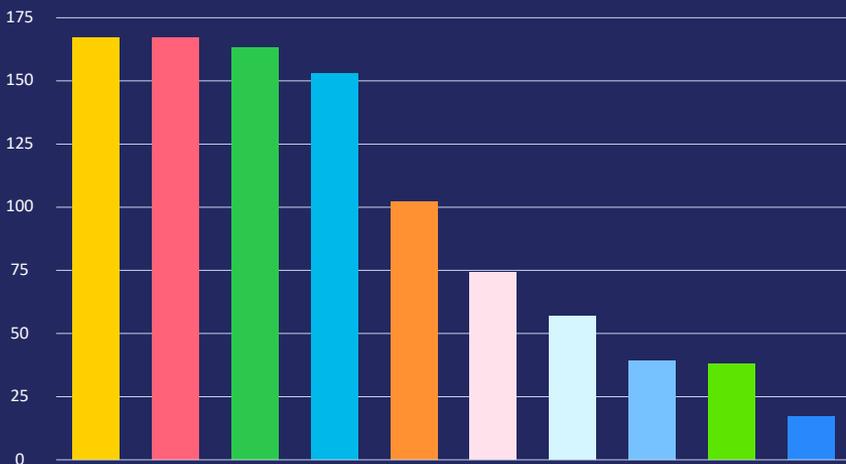

11 OpenEdge Command Center PAS for OpenEdge Management Features

The responses help prioritize the PAS for OpenEdge management features that can be added to OpenEdge Command Center in the future.

- Update PASOE runtime properties
- Export/Import PASOE config between two releases
- Monitor PASOE multi-session agent requests
- Configure/manage end-to-end PASOE security
- PASOE diagnostics to get thread dump, collect logs
- Difference between 2 PASOE environments
- Apps/Services migration between two PASOE releases
- OE install visibility & support for updates

12 Distributed Tracing for OpenEdge Application Performance Monitoring

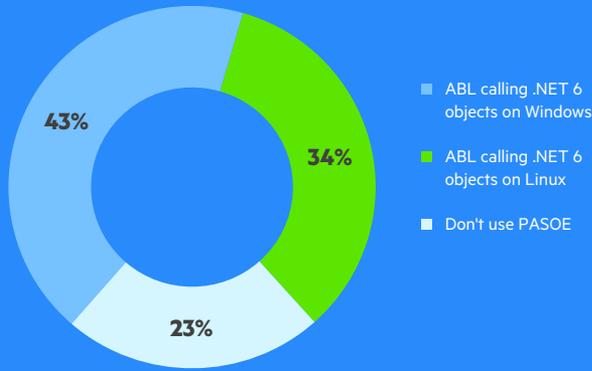

- Application performance analytics and alerting
- Understand DB & AppServer issues caused by ABL
- Trace an ABL execution times to find problems
- Trace a Database query for execution times
- Trace error events in my application
- Monitor & trace Database transactions
- Trace temp table operations
- Trace & monitor web transports in AppServer
- Trace Database connect/disconnect/reconnect operations
- Action and rollback times for optimization

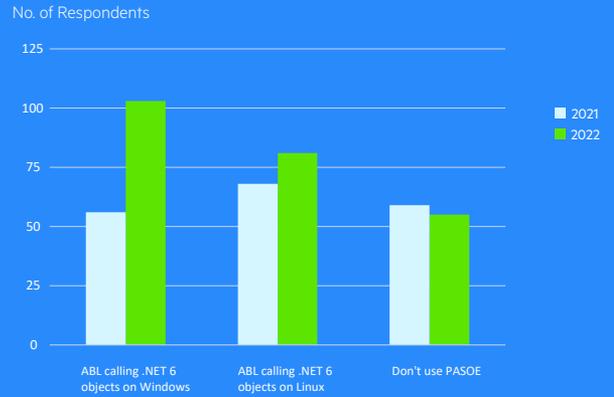

The majority of respondents have a continued interest in locating application performance issues in their ABL code.

Microsoft .NET Insights

For Windows-based applications, there is strong interest in support for .NET 6 on both the Windows and Linux platforms.

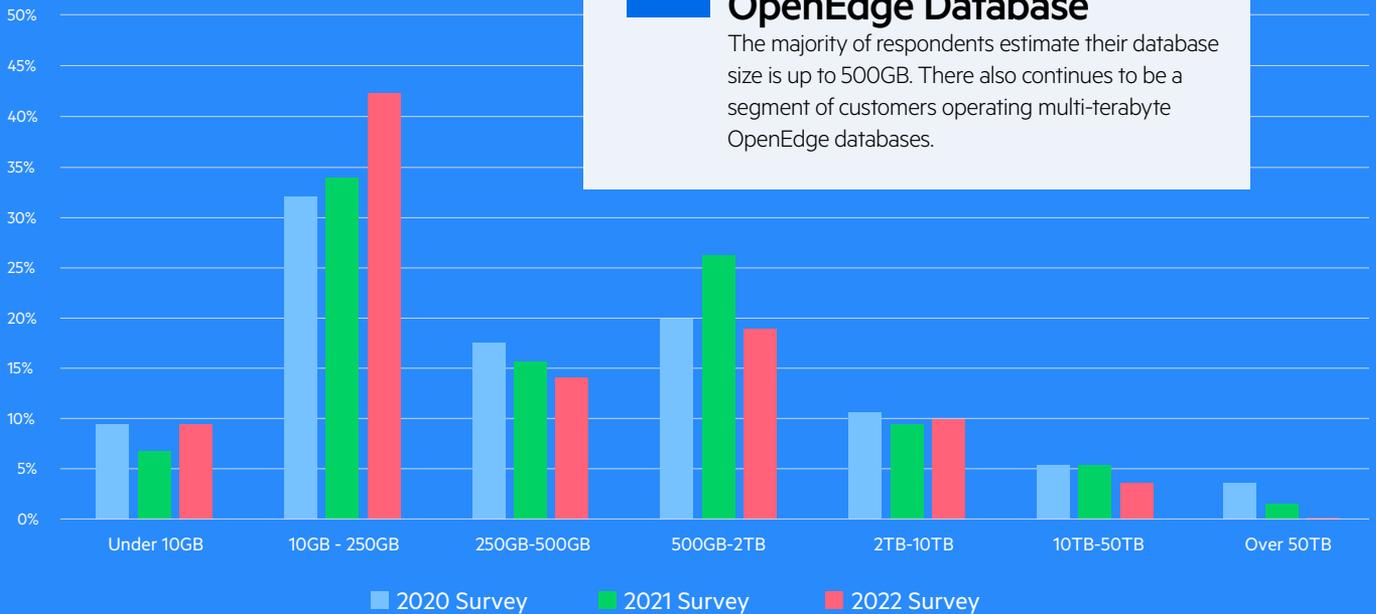

Your .NET Strategy for PASOE - Multi-select

.NET Strategy for PASOE by Year

14 Size of the Largest OpenEdge Database

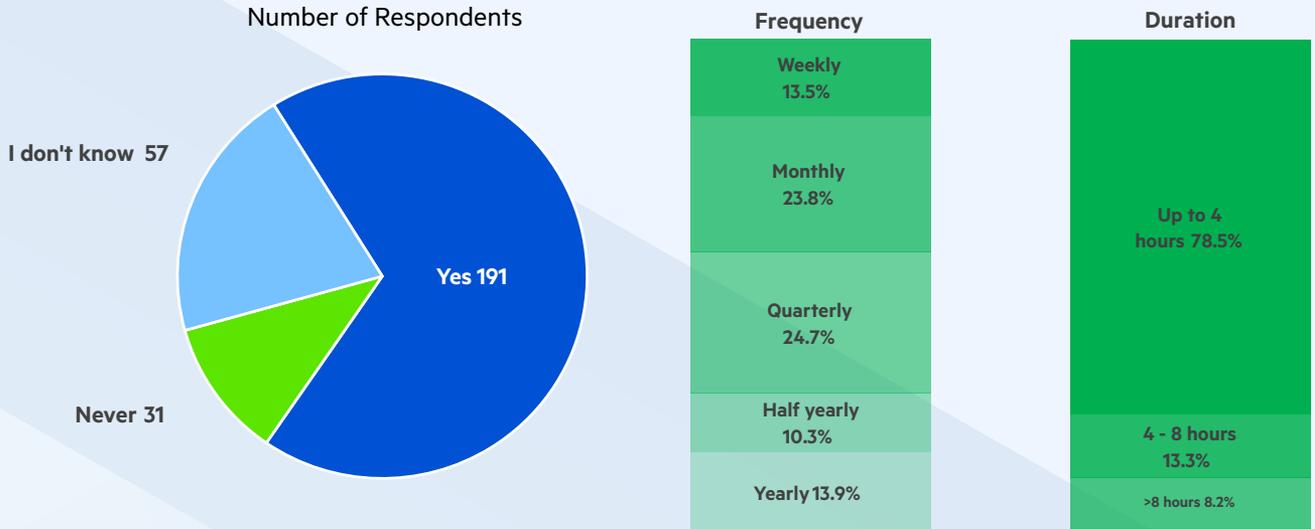

The majority of respondents estimate their database size is up to 500GB. There also continues to be a segment of customers operating multi-terabyte OpenEdge databases.

15

Maintenance Outages – Planned

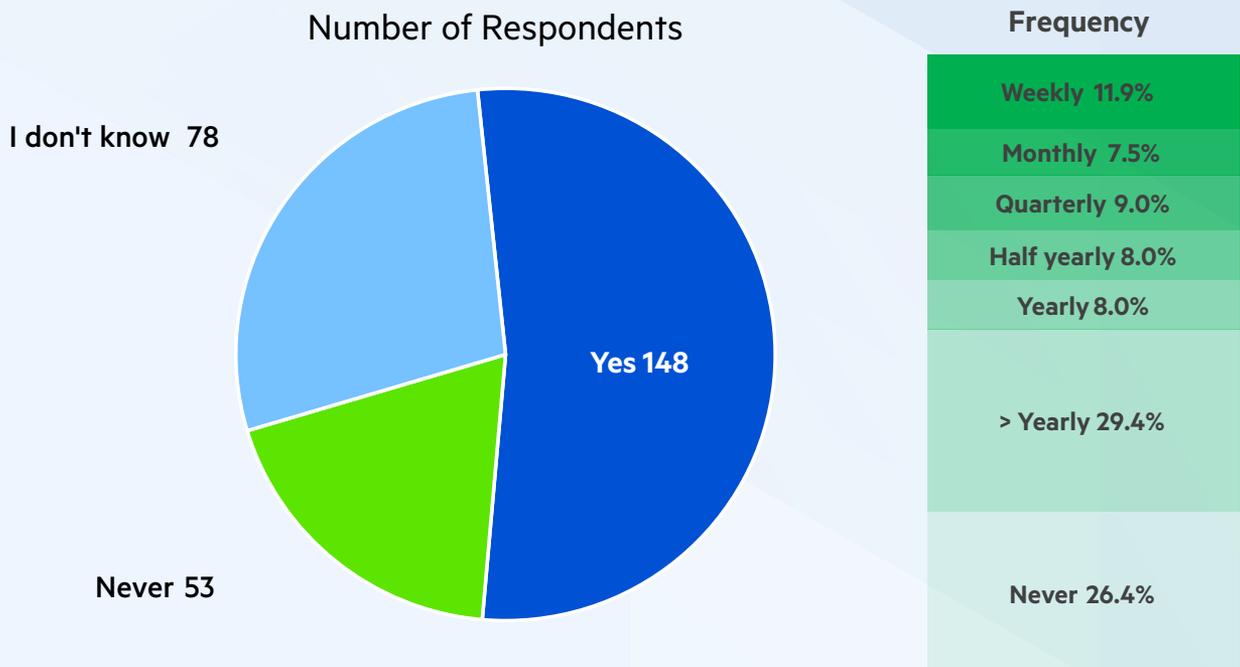

The majority of respondents have planned outages that are short (up to 4 hours) in duration.

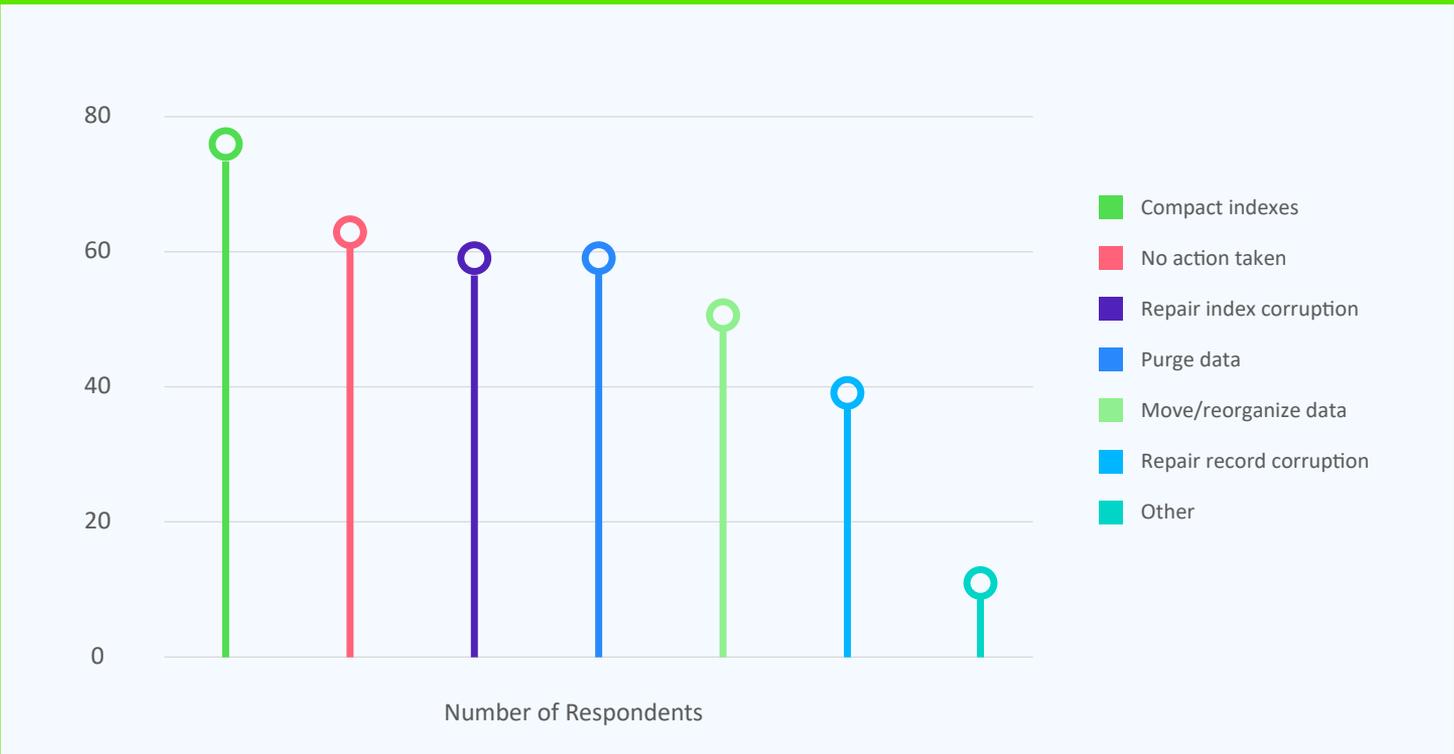

16

Health Checks

Over 50% of respondents reported using some kind of health check by using the OpenEdge Database tools like DBTOOL, IDXFIX, IDXCHECK.

Post-Health Check Actions

The most frequent activity after a database Health Check is the pre-emptive index compaction, closely followed by no activity at all - there were no issues reported by the health check.

 **Make sure to take part in the next OpenEdge Product Survey to give your feedback and help shape the future of OpenEdge!**

About Progress

Dedicated to propelling business forward in a technology-driven world, [Progress](https://www.progress.com) (NASDAQ: PRGS) helps businesses drive faster cycles of innovation, fuel momentum and accelerate their path to success. As the trusted provider of the best products to develop, deploy and manage high-impact applications, Progress enables customers to build the applications and experiences they need, deploy where and how they want and manage it all safely and securely. Hundreds of thousands of enterprises, including 1,700 software companies and 3.5 million developers, depend on Progress to achieve their goals—with confidence. Learn more at www.progress.com
