SUMMARY

Icanpreneur’s mission is to boost the odds of success for tech entrepreneurs and product builders. To achieve this, the tech startup is building the first Accelerator-as-a-Software platform, designed to guide users from idea to product-market fit in a structured way. Tailored to streamline the entrepreneurial journey, Icanpreneur’s AI platform delivers actionable guidance based on proven methodologies and the needed software tools to facilitate the process seamlessly and effectively.

The team needed to establish the fundamentals for rapid iteration, rich customization and stellar user experience to fulfill their ambitious vision.

The Icanpreneur team picked Progress® Kendo UI® as the leading development component library with notoriously good customer service. The team established a consistent, scalable design framework that supported seamless handoffs and intuitive, engaging user interactions by using Kendo UI as their foundational toolkit. This early commitment to Kendo UI has been instrumental in Icanpreneur’s ability to deliver a visually cohesive, high-performance product that meets the evolving needs of its users.

Challenge

Before starting any development, the [Icanpreneur](#) product team knew they needed to design a UI-intensive application with a wide variety of components. Building everything from scratch would take significant time, so the team had to look for a more efficient way.

The goal was to achieve consistency and appealing UX across the platform with minimum overhead during the implementation. The team also had limited time to validate their product and get to product-market fit and they had the ambitious goal of shipping the product’s first version within a couple of months.

The Icanpreneur platform poses some unique challenges from a UI standpoint:

- Multiple small standalone applications, such as mini-CRM, calendar and event scheduler and canvas whiteboard, are integrated into a holistic platform.
- Guided journey experience that had to educate, guide and support the customer without hindering their productivity.
- Non-trivial user interfaces like the Lean Canvas with high information density that includes strong collaboration elements.

Solution

Efficient Development with Kendo UI Utilities and Components

The whole Icanpreneur platform is built using the powerful library of [KendoReact](#) components, a [custom Kendo UI](#) theme, heavy use of [CSS utilities](#) and component classes. To lay the foundation of the platform’s user interface, the team relied on the rich design tools available in the [Telerik and Kendo UI](#) portfolio.

Implementing Kendo UI Design Kits

The Icanpreneur Design System is built based on the [Kendo UI Design Kits for Figma](#). This saved significant time from the initial cost of implementing a design system as it provided most of the design building blocks as a component library. As an additional benefit, using the UI Design Kits facilitated full compatibility between the design requirements and the development components used by the engineering team. The extensive and insightful [Design System Kit](#) documentation helped the team get up to speed with the library as fast as possible.

Design System Documentation

Based on the design system, the Icanpreneur team built documentation of all the main components and the typography. This serves as an easy-to-use demo of the components and their capabilities during the implementation, which also speeds up the implementation process.

Custom Kendo UI Theme

The design system became the foundation for building a custom Kendo UI theme. Thanks to the exhaustive CSS file that is shipped as part of the default theme, the process was straightforward.

Results

Faster Development Cycles

Rapid development at both design and implementation levels. As a startup company, Icanpreneur goes through an intensive, continuous improvement process and the streamlined and standardized UI components help to reduce the back-and-forth and the time spent implementing basic components.

Customer support was instrumental in the Kendo UI offering. When speed is everything, the smallest friction can significantly impact deadlines and deliverables. At a certain point, the team hit a limitation in one of the components, which was raised in a support ticket. The issue was addressed in a timely manner with changes in the product, helping the team get the job done.

Design Consistency and Flexibility

Consistent, easy-to-use design elements with room for customization. When making user experience decisions, the Icanpreneur team is guided by what would be most beneficial for the users. In that regard, Kendo UI proved to be an enabler rather than a limiting factor.

The rich customization capabilities gave the product designer and the engineering team the capability they needed to exceed the customer expectations. As an additional benefit, Kendo UI components provided accessibility features that were out of the box, which allowed the team to focus on other priorities.

Smooth Team Onboarding

Documentation and having a design system made it easier for new team members to adapt quickly. The onboarding process is supported by the rich documentation and support service available, as well as the heavy standardization of the development practices.

Building a platform with complex user interactions is no easy task and Kendo UI has proven to be a reliable tool for the product team. It enables them to rapidly implement their innovative ideas in the age of AI, allowing their customers to excel and shine. “With KendoReact, we built a platform that seamlessly aligns with our boldest ambitions,” concludes Vesko Kolev, Founder & CEO of Icanpreneur.

“With KendoReact, we built a platform that seamlessly aligns with our boldest ambitions.”

Founder & CEO of Icanpreneur

Bring your ideas to life and deliver world-class products to your users with Kendo UI. See what you can achieve with Kendo UI today.

About Progress

Progress (Nasdaq: PRGS) empowers organizations to achieve transformational success in the face of disruptive change. Our software enables our customers to develop, deploy and manage responsible AI-powered applications and experiences with agility and ease. Customers get a trusted provider in Progress, with the products, expertise and vision they need to succeed. Over 4 million developers and technologists at hundreds of thousands of enterprises depend on Progress. Learn more at www.progress.com
