

Training: Sitefinity Training for Admins and Designers

Course Duration 1 day

Audience Website administrators, web designers or web developers who intend to use the default Sitefinity functionality

Description This class starts with basics on how to create websites using built-in modules, design custom web pages and customize workspace. Manage your website by controlling permissions, workflow, notifications and lifecycle, from publication scheduling to expiration and archiving.

Objectives **After taking this course, you should be able to:**

- Perform the initial website setup
- Tour the Sitefinity user interface
- Use out-of-the-box content to deliver news, blogs, events, images, documents, video or any generic content
- Manage all images, documents, files, etc. in one central location
- Build custom web pages using drag and drop
- Use versioning to keep track of editing change dates, status and authors
- Manage roles and permissions
- Manage the content lifecycle, from content creation, approval (workflow), schedule publication and expiration to archiving
- Theme and style your website and pages
- Use Cascading Style Sheets (CSS) in Sitefinity
- Use external templates
- Load websites into Visual Studio
- Use master pages
- Load custom controls
- Deploy websites

Prerequisites

Students should already be able to:

- Understand the basics of how web applications work
- Understand basic HTML concepts (helpful but not required)
- Understand basic CSS (helpful but not required)
